The invention relates to an Arabidopsis thaliana nucleic acid (I) C comprising a sequence capable of hybridising under stringent conditions CC to a sequence selected from any one of 999 sequences (ABN98233), CC given in the specification or its fragment. A polypeptide (II) encoded by C(I), a transgenic plant (III) comprising an exogenous nucleic acid or a CC genetically modified cell (IV) comprising an exogenous nucleic acid, is CC useful for screening a candidate agent for its biological effect. (I) is CC useful in identifying homologous or related genes, in producing CC compositions that modulate the expression or function of its encoded protein, mapping functional regions of the protein and in studying CC associated physiological pathways. (I) is also useful for the genetic manipulation of cells, particularly plant cells. (I) is also useful in CC care best capable of withstanding a particular disease or environmental CC stress. (II) and (III) are useful for screening of biologically active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Arabidopsis thaliana; plant; insecticide; fungicide; transgenic; disease; crop; thale cress; tolerance factor: insect rathogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ABN98932 standard; DNA;
                                                                                                                                                                                                                                                                                                                                                                                                                                 New Arabidopsis thaliana nucleic acid for identifying homologous genes, producing compositions that modulate the expression or function of its encoded protein, and mapping functional regions of protein -

cc agents, e.g. fungicides, insecticides, etc., for elucidating biochemical cc pathways. The screened agents are useful in improved methods of treating cc crops to prevent or treat disease. (II) are also useful in screening cc programs to identify agents that mimic or enhance the action of tolerance cc factors. Such agents are useful in improved methods of treating crops to cc enhance their tolerance to environmental stress. (I) is also useful cc for enhancing or inhibiting production of a biosynthetic product in a cc plant. (III) is useful for identifying other mediators that may induce expression of proteins of interest, for establishing the extent to which cc any specific insect and/or pathogen is responsible for damage to a cc particular plant, for identifying other mediators that enhance or induce consynthetic pathways of nutritional, commercial, or medicinal value and cc particular plant, for identifying other mediators that enhance or induce to incomposite to environmental stress, for identifying factors involved in cc particular plant, for identifying other mediators that enhance or induce to incomposite the productions of nutritional, commercial, or medicinal value and cc value. (IV) is useful in the study of genetic function and regulation, cc for alteration of the cellular metabolism and for screening compounds that may affect the biological function of the gene or gene products.

Cc Note: The sequence data for this patent did not form part of the printed conscription of the printed conscription in the study of sequence.html?DocID-99909770445.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAA70724 standard; DNA; 4347
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the genomic DNA region from Thermus thermophilus which contains the coding regions for the L-lysine biosynthetic protein homoaconitase hydratase subunits I and II. The gene can be used for the generation an L-lysine-producing Thermus thermophilus strain for the production of L-lysine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    JP2000157276-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Thermus thermophilus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to the isolation of novel DNA-binding CC proteins (AAU18154-AAU18281), and cDNA and genomic sequences encoding CC for these proteins. DNA-binding proteins such as histones, chromo CC (chromatin organisation modifier) domain proteins and Y-box binding CC proteins may contribute to diseases resulting from aberrant DNA CC organisation and/or gene transcription. The sequences of the invention CC are useful in screening assays to identify antagonists and/or agonists cthat may enhance or block activities mediated by DNA-binding proteins. CC Blockers of DNA-binding proteins may be useful in treating disorders cc (e.g. diabetes mellitus), rheumatic diseases (e.g. rheumatoid cc arthritis), genetic abnormalities (e.g. cancer), autoimmune disorders CC diseases (e.g. HIV) and neurological disorders (e.g. Alzheimer's CC diseases). The polynucleotide sequences of the invention may also be cused in gene therapy. AAS29030-AAS29157 represent cDNA sequences CC Note: The sequence data for this patent did not form part of the printed cspecification, but was obtained in electronic format directly from WIPO CC at figure and the control of the printed control of the printed control of the control of the printed control of the control of the printed cc at figure and the control of the printed control of the control of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The present invention relates to the isolation of novel DNA-binding proteins (AAU18154-AAU18281), and cDNA and genomic sequences encoding for these proteins. DNA-binding proteins such as histones, chromo (chromatin organisation modifier) domain proteins, and Y-box binding proteins may contribute to diseases resulting from aberrant DNA crystalian and/or gene transcription. The sequences of the invention are useful in screening assays to identify antagonists and/or agonists that may enhance or block activities mediated by DNA-binding proteins. Blockers of DNA-binding proteins may be useful in treating disorders such as malignant diseases (e.g. cancer), autoimmune disorders (e.g. diabetes mellitus), rheumatic diseases (e.g. rheumatoid arthritis), genetic abnormalities (e.g. cystic fibrosis), infectious diseases (e.g. HIV) and neurological disorders (e.g. Alzheimer's disease). The polynucleotide sequences of the invention may also be used in gene therapy. AAS29030-AAS29157 represent cDNA sequences on over DNA-binding proteins.

Note: The sequence data for this patent did not form part of the printed at first transport of the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid molecules encoding human secreted chromosomal binding proteins, used in preventing, treating or ameliorating a disorder, Alzheimer's and Parkinson's diseases and cancers -

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, in activity activity and activity in the diagnosis and/or activity in the diagnosis and/or inflammation cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AAI99683) and H37RV (AAI99683). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of M. tuberculosis genetics, epidemiology, patient treatment and epidemic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid (I) encoding nematode transglutaminase. (I), optionally incorporated into recombinant viruses or cells, are used to treat or prevent infestation by parasitic nematodes in humans or animals, especially by Dirofilaria immitis, Brugia malayi or Onchocerca volvulus. (I) can also be used for expression of the corresponding recombinant proteins which are also useful in antinematode vaccines and for raising antibodies (useful for treatment or diagnosis). ABK82304-ABK82347 represent nematode transglutaminase

                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid (I) encoding nematode transglutaminase. (I), optionally incorporated into recombinant viruses or cells, are used to treat or prevent infestation by parasitic nematodes in humans or animals, especially by Dirofilaria immitis, Brugia malayi or Onchocerca volvulus. (I) can also be used for expression of the corresponding recombinant proteins which are also useful in antinematode vaccines and for raising antibodies (useful for treatment or diagnosis). ABK82304-ABK82347 represent nematode transglutaminase coding sequences and primers of the invention.

APPLICANT: La Rosa, Thomas J.
TITLE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated with TITLE OF INVENTION: Plants
FILE REFERENCE: 38-21(15401)B
CURRENT APPLICATION NUMBER: US/09/878,574
CURRENT FILING DATE: 2001-12-21
PRIOR APPLICATION UMBER: 09/333,535
PRIOR FILING DATE: 1999-06-14
NUMBER OF SEQ ID NO 157
SEQ ID NO 157
SEQ ID NO 157
CENCTH: 369
TYPE: DNA
ORGANISM: Glycine max
ORGANISM: Glycine max
OTHER INFORMATION: Clone ID: LIB3028-054-Q1-B1-E8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

/note="Organ: Anthracnose-infected leaves from
two-week-old sorghum plants 48 hr after inoculation;
vector: pBluescript II from Lambda Zap II; Site_1: XhoI;
Site_2: EcoRI; Two-week-old sorghum plants (BTX 623
cultivar) were infected with pathogen (isolate FRM42I of
Colletotrichum graminicola, which is a sorghum isolate).
RNA was prepared from infected leaves harvested from 45
seedlings 48 hours after inoculation. Note: young
seedlings (2 weeks old) exhibit juvenile resistant
reaction, which is an incompatible interaction. As they
grow older (4 weeks or older), plants resume susceptiblity
to anthracnose disease. The library was made from poly-A
RNA in the cloning vector lambda Zap II. Clones to be

/note="Vector: lambdaZAP: Site_1: EcoR1; Site_2: Xho1; Seeds were surface sterilized then germinated under axenic conditions in the dark at room temperature on filter paper with water, nystatin and cefotaxime in covered crystallization dishes. Five day old seedling shoots were then harvested, total RNA was propared, poly(A) RNA was purified, one primary unamplified cDNA library was made, and I million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids. These steps were performed in the TJ Close laboratory at the University of california, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   rwing@clemson.edu

Sequences are present from libraries 486, 487, 496, 603, 605, 606, 614, 618, 660, 683, 687, 707, and 945. Contigs were assembled using TIGR's CAP program and a representative EST from each contig was selected for the Unigene set. All singlets were also selected."
